

LEARN CELESTIAL NAVIGATION

- **Modern Celestial Navigation**
October 18-19, 2014. An easy introduction to sextants and celestial sights, latitude by Noon Sun, navigation apps and calculator methods, position fix by observing artificial satellites, and compass bearing by Sun and stars.
- **Celestial Navigation: 19th Century Methods**
November 1-2, 2014. An introduction to sextants and celestial sights from a historical perspective, focusing on the actual logbook entries and navigational calculations from Mystic Seaport's famous 1841 whaleship, the Charles W. Morgan. We'll learn latitude by Noon Sun and longitude by "time sights" using traditional tables and pencil and paper calculations.
- **Lunars: Finding Longitude by Observing the Moon**
November 15-16, 2014. An intermediate level class in the famous method of finding longitude by lunar distances, known for short as "lunars". Follow in the footsteps of James Cook, William Bligh, Nathaniel Bowditch, and Joshua Slocum.

All classes are offered at Mystic Seaport Museum, Mystic, CT. Classes taught by Frank Reed, details at ReedNavigation.com.

Mystic Seaport Reservations: 860-572-5322, press 1 at the prompt.
